

Introducing Armstrong® TECH ZONE from Armstrong.
A clever solution for intelligent ceilings

Armstrong® TECH ZONE is an innovative solution that allows full integration of service elements to create more flexible, homogeneous ceilings.

Exclusive to Armstrong®, TECH ZONE is a partnership with market leading manufacturers of lighting fixtures, air diffusers, chilled beams and sprinkler systems. Partners include Rapidrop, Regent lighting, Trox and Zumtobel. Through the guaranteed integration of market leading service elements, Armstrong® TECH ZONE offers a novel solution to the challenges that come with the design of aesthetic, technical zones with standard elements. Monolithic ceiling solutions with minimal grid visibility as well as linear technical zones for service integration can now be achieved with Armstrong® TECH ZONE.

High sound absorbing products and linear technical zones can be used in open spaces and offices, whilst effective lighting solutions and invisible speakers will meet the aesthetic needs of retail buildings.

Armstrong® TECH ZONE is easy to both specify and install. It is compatible with popular building modules, and Armstrong can customise solutions to meet your individual needs. The combinations of suspension systems, tiles and technical elements are virtually unlimited.

A dedicated website as well as images and downloadable brochures are available online. The Armstrong® TECH ZONE brochure includes performance solutions, product combinations as well interesting case studies. A more detailed Technical Guide, with 20+ building module drawings, CAD details, and partner product sheets is also available.

To receive your copy of the brochure, or for further information, please contact Internal Technical Sales on 0800 371849 (UK) or 1800 409 002 (ROI) or visit www.armstrong-ceilings.co.uk or www.armstrong-ceilings.ie.
