**Niko LED strips are taking the lead!**

*LEDs are the future*

*Are LEDs a thing of the future? Absolutely not. They are making a strong advance now. Not only in professional projects, but also at home. Why? LEDs are energy efficient, reliable, shock-resistant and have a long lifespan. The LED strips from Niko go above and beyond that. You can install them easily, operate them simply and most importantly—they are affordable.*

architect Luc Van Ghysel

**LED strips for every lighting need**

The LED strips from Niko offer extensive possibilities: a warm atmosphere in the living room, functional lighting in the kitchen, safety lighting in the hallway or corridor - All sorts of atmosphere lights become unnecessary. A bar cabinet, night stand, TV-cabinet, bookcase - they can all be outfitted with a line of light using LED strips. You can tune the atmospheric lighting to the time of day, to your mood at the moment or to the task at hand. In an instant you adjust the intensity as well as the colour of the light to your liking. LEDs are energy efficient - they produce astounding results with much less energy consumption. So, for example, in the kitchen, you can leave the atmospheric lighting on once in a while without having to worry about your electricity bill or the environment.

**LEDs as orientation or safety lighting**

If you subtly illuminate your steps with LEDs, mood is not the only thing you create. At night the staircase is no longer a dangerous obstacle. You can run quickly to the toilet in the dark without turning on an extra light and waking up the whole family. For the children, a LED lamp next to the bed is a reason to never be afraid of the dark again. And an extra benefit - the kids can't burn their fingers on a LED lamp.

**White or colour**

Niko offers you three kinds of white: cold, neutral and warm. In addition, there is red, amber, blue and green. Niko has monochrome as well as RGB LED strips in its assortment. For discreet integration in every interior, the basis is white or black. The centre-to-centre distance between the LEDs is always the same, even when connecting two strips. That ensures a beautifully uniform line of light.

#### **Why choose LEDs? 7 convincing reasons:**

- **LEDs require no maintenance and are much longer-lasting**

With a life span of 50,000 hours and an average of 4 burning-hours per day, you only have to replace them after thirty years.

- **LEDs are energy efficient**

They barely get warm, so much less energy is lost.

- **LEDs take up very little space**

Because of their compact form, they can be easily concealed in your interior, even in places where other light sources don't fit.

- **LEDs do not burn your fingers**

Since they never get warm enough to burn you, LEDs are especially child-friendly.

- **LEDs do not discolour the surroundings**

LEDs do not emit UV or IR radiation. That makes them ideal for the illumination of photos or works of art.

- **LEDs react quickly**

In contrast to fluorescent lighting, LEDs emit plenty of light immediately after being switched on. And you can switch them on and off as many times as you like, because doing so has no effect on their lifespan.

- **LEDs can be RGB-driven**

In this way, you can change the colour of the light. Enjoy the show!

#### **Installation in the snap of your fingers!**

The unique and patented Plug and Play principle guarantees a speedy, nimble-fingered installation. The results you achieve will impress everyone. The possibilities for using LEDs are as unlimited as your own creative inspiration.

*Niko NV designs and produces advanced solutions for electrical switching material, lighting control, home automation systems, intercom systems and videophones. All over the world, both individuals and professional customers choose for Niko's quality solutions because of their ease of installation, ease of use and their design.*

*Niko commercializes its solutions all over Europe from offices in Belgium, France, the Netherlands, Slovakia and the United Kingdom, but also via distributors throughout the world.*
